Regarding the visual report on page 10, It's shows the weekly sale for each store depends on Store size after considering Is Holiday True or False over more than one year.

It shows the below :

- a. There are some stores not achieve the predict weekly sale comparing with other stores. ex. Store 25 and Store 11.
- b. There are some stores achieve weekly sale more than the predicted one comparing with other stores. ex. Store 10.

Recommended actions :

- For point a : The stores need to be replaced with another smaller size to reduce rent revenue.
- For point b : The stores need to expand to be compatible with their weekly sale.

Predict the **Department**-wide sales for each Store
